Ring Verse

*Three Rings for the Elven-kings under the sky,*
*Seven for the Dwarf-lords in their halls of stone,*
*Nine for Mortal Men doomed to die,*
*One for the Dark Lord on his dark throne,*
*In the Land of Mordor where the Shadows lie,*
*One ring to rule them all, one ring to find them,*
*One ring to bring them all and in the darkness bind them*
Nine Reasons for Hope in the Kingdom of Men (& Women)
I. There was Plenty of Job Growth on Middle Earth (OK, America)

II. A Tower of National Debt

U.S. Federal Debt Held by the Public, % of GDP

- Relative to the size of the economy, federal debt in 2020 is projected to be nearly twice its average over the past 50 years.
- At the end of 2033, debt is projected to reach a higher level than it has at any point since just after World War II.

- Over the 2021–2030 period, deficits are projected to average 4.8% of GDP, totaling $13.1 trillion.
- Over the past 50 years, deficits averaged just 3.0% of GDP.

Debt balances have been rising steadily for 5 years and are now $1.5 trillion higher than the previous peak in 2008Q3 of $12.7 trillion. Overall household debt is 26.8% above the 2013Q2 trough.

Global Economy was Already Fragile

- In a recent news briefing International Monetary Fund (IMF) Managing Director Kristalina Georgieva indicated that global spread of the novel coronavirus has crushed hopes for stronger growth this year and will hold 2020 global output gains to their slowest pace since the 2008-2009 financial crisis.

- The IMF now expects 2020 world growth to be below last year’s 2.9% rate. Trade wars pushed global growth last year to the lowest rate since a 0.7% contraction in 2009.

- The downgraded forecast would represent a more than 0.4 percentage-point drop from the 3.3% growth the IMF had estimated for 2020 in January.

- “Global growth in 2020 will dip below last year’s levels, but how far it will fall and how long the impact will be is still difficult to predict,” Georgieva said.

- She declined to say whether the escalating health crisis could push the world into a recession.

- IMF’s revised forecasts will be issued in coming weeks.

Goldman Sachs: Growing Downside Risks

• In early February, Goldman Sachs economists estimated that the coronavirus would subtract 2 percentage-points (pp) (annualized) from global GDP growth in 2020Q1.

• Now, Goldman Sachs estimates that the impact will be a reduction of 5pp in 2020Q1.

• For the full year, Goldman Sachs expects global growth to slump to around 2%, down from their previous 3% forecast.

• Goldman Sachs now projects that the U.S. will register just 0.9% growth in 2020Q1 and will not grow at all in 2020Q2.

• Goldman Sachs economists said in a recent note that “while the U.S. economy avoids recession in our baseline forecast, the downside risks have clearly grown.”
• Oxford Economics forecasts GDP growth to slow to just 1.9% YOY in 2020Q1
• They have lowered their forecast for 2020 as a whole from 2.5% to 2.3%, down from 2.6% in 2019.
II. Economic Impact of Past Pandemics – This One Will be Worse

• Goldman Sachs analyzed GDP changes during other pandemics, including the 2003 SARS episodes in China, Hong Kong, and Canada, the 1957 Avian Flu in the U.S., and the 2015 MERS episode in South Korea.

• The average episode saw a GDP hit of 4-5% in the 1-2 quarters after the outbreak, though the variation was substantial.

My Three Ideas

• Commence massive transfers from federal government’s sales of Treasuries to state and local governments –
  • Why? Because these levels of government have to balance their budgets each fiscal year and federal government borrowing costs are ultra-low;
• Allow debtors to make interest only payments – or alternatively, provide a limited holiday for debt service payments with no penalties –
  • Why? If people start losing their homes or businesses, a temporary shock becomes permanent. At the same time, creditors need to remain financially healthy, so this has to be limited in time and scope;
• Adjust rules for testing on humans, emphasizing volunteerism and the presence of certain critical circumstances.
Forecast

- Recession has already begun globally and in United States – I still expect short and vicious;
- Best positioned people work in the public sector – greater job stability – private sector workforce will be hammered – unemployment will soon be greater than 5 percent;
- Our expectations are steadily adjusting to the downside;
- When it commences, recovery from this crisis will be sharp, profound, and most welcome – interest rates low, pent-up demand high, need to rebuild inventories, and people anxious to meet again, go to restaurants, see a movie, watch the Orioles, and engage in other most wonderful of human activities.
